

VIDEO TRAINING RECORD			
VIDEO TITLE Dump Truck Safety		VIDEO ID NUMBER 5-0007	
<p align="center">KEY TEACHING POINTS OF THE VIDEO</p> <p>In order to keep your dump truck in good and safe operating condition, you must perform routine proper maintenance and pre-startup inspections. This is the key to a well maintained vehicle. Be sure that all vital fluids (engine oil, coolant, power steering fluid, brakes, air and hydraulic fluid) are checked and within normal limits. Dirt is the number one enemy of motorized vehicles. Keep dirt free from entering the engine, transmission and hydraulic systems. An important part of truck maintenance is to stop the vehicle if you notice unusual noises. Pull over safely and check it out rather than take the chance of causing additional damage. Check tires, windshield for signs of wear or damage. Check valves on the air tank to make sure they are closed before starting the truck. Double check and make sure all gauges are functioning properly and are within the normal operating range. When fueling, make sure the nozzle of the fuel pump hose is grounded to the filler neck to prevent static electricity from causing fuel to ignite. If you see a fuel spill, clean it up. When driving a fully loaded vehicle, you need to be alert at all times. Cover wet loads before driving to prevent material from blowing off the truck. Before dumping the load make sure there are no overhead wires. When driving in wet, muddy or slippery conditions avoid the tendency to oversteer, decrease speed, allow yourself extra stopping distance and pump brakes. The driver is ultimately responsible for the safe operation of the vehicle. Follow all safety procedures and rules.</p>			
QUESTION		ANSWERS	
		TRUE	FALSE
1 The key to keeping a dump truck safe and well maintained condition is proper routine maintenance.			
2 Vital fluids should be checked and kept within normal range.			
3 If you notice an unusual noise while driving, you should continue unless the noise gets worse.			
4 Before starting the truck, check the tires and windshield for signs of wear or damage and make sure the air tank valves are closed.			
5 The supervisor is responsible for safe operating of the dump truck.			
EMPLOYEE'S NAME	EMPLOYEE'S SIGNATURE	DATE	
INSTRUCTOR'S NAME	SUPERVISOR'S SIGNATURE	DATE
